Revised August 2026

Incentive details and requirements

- For full details on how the voluntary Efficiency Works Flex Thermostat program works, see the Offering Guide here.
- Incentives are available to residential and commercial electric customers of Estes Park Power and Communications, Fort Collins Utilities*, Longmont Power & Communications and City of Loveland Utilities.
    - *Fort Collins Utilities electric customers with an eligible Google Nest thermostat may participate in the Efficiency Works Flex Thermostat offering. For other thermostat models, Fort Collins Utilities offers its own grid flexibility programs. Learn more at the Peak Partners website.
- Eligible thermostat models are listed here.
    - This list may change without notice.
- The enrolled thermostat must remain internet-connected and registered with the device provider (i.e., Google Nest, ecobee, Honeywell, etc.).
- Participant must own, rent or lease the equipment and be authorized to make decisions for the enrolled address.
    - Residential and commercial tenants renting a site may be eligible to participate if the thermostat is registered in the renter's name, using their rental address and email address.
- Participating thermostats must control electric HVAC equipment (i.e., central air conditioner, heat pump or baseboard electric heaters).
    - Thermostats connected only to natural gas furnaces are not eligible to participate.
- Thermostat demand response programs may not be suitable in households or businesses with individuals who have health issues or those who are particularly sensitive to changes in indoor temperatures.
- Efficiency Works reserves the right to change incentives or discontinue the offering at any time.
- In addition to meeting the criteria above, the following factors will be considered before Participant enrollment is approved:
    - Multiple smart thermostat devices may be eligible for enrollment at the same electric service address if they control unique HVAC equipment. Enrollment and participation incentives apply per participant service address, not per enrolled thermostat device. Commercial sites with multiple participants per service address may be eligible for multiple incentives per address. Additional verification may be required before enrollment approval.

  - If an existing participating smart thermostat is replaced with a new eligible device, the new device may need to be re-enrolled. An additional enrollment incentive will not be issued, but Participant remains eligible for annual participation incentives.
  - Participant's smart thermostat device must be tied to an individual electric meter. Multiple residential or commercial tenants using a shared electric master-meter may not be eligible.
- Annual incentive requirements (paid in the fall of each year, typically in October)
  - Enroll before August 31 for first-year eligibility.
  - Keep the device enrolled, registered and internet-connected at the approved address.
  - If a device is disconnected for an extended period of time, an email reminder to reconnect may be sent.
  - Participant must maintain at least 25% participation in thermostat adjustment events per year.
    - If a Participant does not meet this threshold, the program reserves the right to limit the annual participation incentive.
  - Participant must remain in good standing with program requirements. Efficiency Works reserves the right to contact participant to troubleshoot device connectivity and verify the device is served by an eligible electric utility.
- Efficiency Works reserves the right to unenroll participants who do not meet minimum connectivity and participation requirements.
