

Indoor agriculture

The Efficiency Works Indoor Agriculture program offers free energy advising and assessments to eligible businesses. A specialized energy advisor will discuss potential opportunities and benefits that efficiency upgrades can provide your business, and can help review bids or discuss ways to plan for future projects.

On-site assessments are catered to the indoor agriculture industry, providing customized reports with industry-specific metrics and potential opportunities that can be implemented now or in the future. There is no obligation to complete an efficiency project after receiving the assessment report.

It's an easy three-step process to get an energy assessment for your business

Schedule

Call or e-mail to schedule a free assessment.

Assessment performed

We look for efficiency opportunities and potential projects that can be implemented now or in the future.

Report completed

We will review the report with you and discuss the benefits that efficiency upgrades can provide.

Eligible businesses for program participation:

- Medical and recreational marijuana dispensaries
- Medical and recreational cultivation facilities
- Hemp cultivation facilities
- Indoor agriculture research facilities
- Agricultural cultivation facilities (tomatoes, micro-greens, lettuces, etc.)
- Greenhouses

About Efficiency Works

Efficiency Works is a collaboration of common efficiency programs between the utilities of Estes Park Power & Communications, Fort Collins Utilities, Longmont Power & Communications, Loveland Water and Power and Platte River Power Authority.
